

THE POWER OF **LEGACY**

AT SAAB WE BELIEVE in the power of legacy. When it comes to Naval Command & Control, this means we want you to be able to build on your previous investments and continue using systems you're comfortable with. That's why all our systems and products are based on scalable, open architecture. Take our CEROS 200 radar and optronic tracking system, for example. It is designed to facilitate trouble-free integration with all types of legacy command and control systems.

Thanks to the modular design, our Naval Command & Control systems open the growth paths required for future upgrades – giving you the freedom to expand your capabilities as your needs change.

And that's the true power of legacy. ●●●●

NAME **CEROS 200**
FUNCTION **TRACKING SYSTEM**
